

SYLVIA CHIMNECHEREM ADIMIKE.

My name is Chimnecherem Sylvia Adimike. I am a Nigerian, I hail from Awka-Etiti in Anambra State. I reside in Prince fadina street, Olodi-Apapa, Lagos. I come from a family of 5 and I'm the second born, my family is a Christian family, a catholic one to be more precise. I attended 2 different secondary schools but I graduated from Kalac Loyola secondary school, trinity bus-stop, Lagos with good grades(3As & 6Bs). I love doing these three things: coding, baking and running.

My career goal is in the tech industry. 5 years from now, I see myself as a software engineer. I want to help create solutions using technical means like writing codes and developing sites, apps, softwares etc. that can help with our problems whether at the local sense or globally. With the knowledge I will gather from coding classes and other personal development and leadership classes, I could build a software that can help with voting and election processes in my country, it will also help with insecurity because people can vote from the comfort of their houses and the vote number shows for everyone on their devices so that the numbers can not be rigged. This and many more are solutions I can build to help my community and gradually the world at large. I will continue my professional development by participating in conferences, attending seminars, and continuing my coding classes.

One thing I know I have been blessed as a person is my background, both at family sense and community wise. I come from a background of determined people, everybody are always on their toes working all round, you just can't afford to lag behind.

In this program, I aspire to gain more knowledge and see programming from my fellow students point of view as well as my instructors. I hope to finally be able to single-handedly build, develop, and efficiently manage sites, apps and softwares and also have that discipline of timeliness instilled in me, of which so far from every indication, I'm going to get that from CodeLab. I also desire to have a community of support where I can fall back to in cases I get confused, or stuck with an error because that's the beauty of it and not self learning. Finally, I desire to be an exceptional software engineer who can write beautiful codes that helps solve problems and give hope to people and also to make money.

I remain Sylvia .C. Adimike.

A student of CodeLab.
