MY CAREER GOALS – SYLVIA ADIMIKE.

My career goals are in the tech industry as I stated earlier in my first assignment. However, gaining javascript skills and being really skillful with it, learning how to network because I understand that networking is much more than simply talking to individuals you work with. It is about developing social and professional contacts with whom you can exchange insights and information and much more tho, allowing this transformational leadership class pass through me and really getting the indepth understanding of it and for it to be part of me, finishing my classes at CodeLab and interning there to gain more experience give back to my society the way CodeLab gave to me are my short term goals which I believe are achievable especially at codelab. At the long run tho, I want to be recognized and known for, for transforming Ajegunle and making impacts especially using technical aspect. I want to be an expert and be known for giving solutions to difficult cases.

I find all technologies interesting but I find the mobile Development more interesting because I feel with it, I can use it as a stone to kill 2 birds in the sense that, if I know mobile development, I can also do web development. Aside from that tho, i find mobile development interesting because the end product is easily more accessible and I feel it's more tasking, I don't want to settle for less. With mobile development, you can build apps that can proffer real time and lasting solutions which can even be used offline.

The high demand of mobile developers is one out of my many reasons on wanting to focus on it. Also, it improves customer engagement if compared to other technologies and can also help

keep customers connected. It also helps my creativity and help me discover many more skills and tactics in identifying solutions and will help improve my way of thinking. Finally, with mobile development, I can help stand out from competition, I could also help build a mobile app for businesses which will help boost sales. Most importantly, I hope to achieve my goals and being consistently active in them.

Thank you CodeLab for this opportunity, this writing also helps us self-reflect and checkmate ourselves, well myself, not to speak for others but I believe so for them.

I remain Sylvia Adimike, a student of CodeLab and an upcoming software engineer guru.
